

DRAPERY HARDWARE
FLEXPINS
RESOURCE

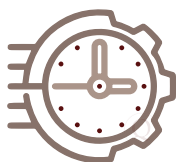

THINGS TO KNOW

ADJUSTABLE HEIGHT Flexpins, have an innovative design that allows the drapery to be raised or lowered 2” at the exact height needed, accounting for sloping floors or ceilings.

WASHABLE Unlike metal hooks, Flexpins are made out of synthetic polymer which makes them water, humidity and rust resistant. Optimal for coastal areas and drapes that require frequent cleaning.

TIME AND EFFICIENCY Our innovative machinery has the ability to sew these Flexpins into the drapery, eliminating the need for separate pinning of metal hooks into the item. The adjustable technology also saves valuable installation time allowing for immediate infield adjustments.

STRENGTH Historically, drapery is pinned with metal hooks, which are put through the fabric and only support where the pin penetrates the fabric. However, Flexpins are sewn into the complete spline of the pleat, supporting up to 20 lbs per pleat.
